

YUNKUN (RICKY) LU

Software Engineer | Distributed Systems | AI Infrastructure | LLM Agents

📍 Los Angeles, CA

in <https://www.linkedin.com/in/yunkun-lu/>

🔗 <https://www.github.com/PaperbagLife>

EDUCATION

University of Southern California M.S. in Computer Science

📅 2025 - 2027

📍 Los Angeles, CA

GPA - 4.00 (ongoing)

Carnegie Mellon University B.S. in Computer Science, Minor in Computational Finance

📅 2018 - 2022

📍 Pittsburgh, PA

GPA - 3.80/4.00 Distributed Systems, Artificial intelligence, Algorithms

EXPERIENCE

Software Engineer Intern at Google

📅 May 2026 - Aug 2026

📍 AI Infrastructure

- Designed and built an LLM-powered autonomous agent skill in Python that automates debugging and incident triage from diagnostic logs, reducing investigation time from hours to under 20 minutes through parallelized agent workflows
- Designed and implemented a telemetry pipeline and monitoring dashboard tracking datacenter diagnostic coverage across thousands of machines, enabling fleet-wide visibility into agent execution and data quality

Software Engineer at Clockwork Systems, Inc

📅 July 2022 - July 2025

📍 clockwork.io

- Designed and built internal monitoring platform from the ground up using Flask + Vue/TypeScript, enabling real-time cluster diagnostics and reducing troubleshooting time by 80%
- Built high-performance GPU cluster from scratch: racked and configured 5 servers with Infiniband/RoCE networking
- Worked on a NCCL plugin to optimize AI/ML training performance, achieving 20% improvement in parallel allreduce traffic
- Created comprehensive documentation and onboarding materials for 5+ new engineers

Software Engineer Intern at Arista Networks

📅 June 2021 - Aug 2021

- Migrated existing service to run on Kubernetes, reducing CPU usage of bare metal servers by up to 10%
- Designed and implemented CI/CD pipeline to automate deployment of new builds to Kubernetes clusters, saved 20 min per future deployment
- Reformatted excessive verbose logging into JSON strings, reduced database load by 70% and made parsing easier

PROJECTS

Hamster Mapster

Multiplayer Party Game

📅 Launching on Steam in 2026

- Designing and implementing procedural map generation system for a 4-player party game
- Built multi-biome tile-based generation algorithm that creates balanced, playable maps with configurable difficulty
- Collaborated with team of 20, including 3 other engineers to integrate map generation with game mechanics and UI

SKILLS

Languages: Python, C++, Golang, TypeScript, JavaScript, SQL

AI & ML: LLMs, Agentic Workflows, Prompt Engineering, Autonomous Agents

Distributed Systems: Kubernetes, Docker, NCCL, RDMA, Infiniband, RoCE

Data & Monitoring: Grafana, SQL, Telemetry Pipelines, CI/CD
